Subject: Ashford Formula Concrete Treatment

Dear Mr. Zubal:

As you will remember we began our addition at our Anna, Ohio facility in 1987. Ashford Formula was eventually applied on 1.2 million square feet of floor surface which included both standard concrete finishes and metallic hardened surfaces.

These floors have held up well under our traffic and the surface has maintained its gloss. We have found that Ashford works especially well when used with metallic hardened floors. I am currently involved with another addition where I've specified the metallic hardener and Ashford to be used on the entire floor.

Sincerely,

Lou Perry
Honda of America
Anna Ohio Facility
